

IT Relationship Management: Aligning IT with the Business - 3 Days

Course 902 Overview

You Will Learn How To

- Build a strong alignment between IT and the business
- Plan a strategy that positions you as a trusted IT advisor to key stakeholders
- Choose IT projects that build trust and alignment
- Articulate IT solutions that meet business needs
- Create clear and effective service delivery agreements
- Differentiate your internal IT services to ensure competitive solutions

Course Benefits

Successful relationship management bridges the divide that often arises between a business unit and its IT department. In this course, you learn the best practices of IT Relationship Management (ITRM) for facilitating actionable IT solutions that provide value to the business and satisfy the needs of business stakeholders. You learn to take on the role of the trusted IT advisor who can align the needs of the business with IT services.

Who Should Attend

IT department managers, IT executives, business/IT liaisons, project managers or anyone who establishes, manages, and maintains the relationship between IT and the business.

RealityPlus™

Extensive performance-based activities throughout this course immerse you in the role of an IT Relationship Manager. You gain practical experience in both the technical and social nuances of serving as a trusted IT advisor to the business. Activities include:

- Experiencing trust firsthand through a dynamic simulation
- Evaluating stakeholders to determine their level of influence and power
- Uncovering and documenting an IT organisation's catalogue of services, including catalogue management
- Recommending solutions to complex, simulated IT relationship problems
- Negotiating and documenting business agreements using industry-standard formats
- Collaborating with others to foster new ideas and innovations
- Assessing performance with a relationship scorecard

IT Relationship Management: Aligning IT with the Business - 3 Days

Course 902 Outline

Overview of Relationship Management
