Course Benefits IT plays a crucial role in enabling your overall business strategy. Effective IT strategic planning is an essential component to the success of the enterprise. IT strategic planning allows an organisation to prioritise IT projects, optimise resource allocation, monitor performance and manage the value of its IT systems. In this course, you gain the knowledge and skills necessary to establish an IT strategic plan that aligns with your organisation's business objectives and core values.

Who Should Attend IT and business managers, senior executives, project and programme managers, enterprise architects and anyone involved in IT strategic planning.

RealityPlus™ Through an engaging case study and interactive team activities, you apply best practices and methods to develop a critical strategic plan that aligns IT with the business. Activities include:

- Deriving key business objectives and core values
- Justifying the need for an IT strategic plan
- Prioritising business objectives with the schema template
- Performing a maturity assessment using the COBIT® framework
- Structuring an Agile approach to strategic planning
- Assessing risks for IT initiatives
- Applying filtering tools to select the top strategic initiatives
- Calculating total cost of ownership
- Compiling and presenting the IT strategic plan
- Quantifying results using a balanced scorecard approach
